
M+W Zander to use QAvalid™

Clarmon Corporation announced today that it has signed an agreement to provide its unique compliance management application ,QAvalid, to M+W Zander.

M+W Zander, a globally active technology enterprise with an 8,000-strong workforce at more than 40 company sites worldwide, will use QAvalid application developed by Clarmon to streamline its Quality Assurance process.

QAvalid is a truly integrated solution that helps companies manage both the information within a document as well as the relations across documents. Linking content across documents means that users will not be required to manually update the information each time they have to change something in a specific file.

QAvalid, through Clarmon's proprietary Linksense technology, allows the management of information within specific documents as well as across documents. Manually creating, verifying and updating compliance documents in Microsoft Word™ implies a very high cost for Quality Assurance.

With QAvalid users will not have to change their way of working, as Microsoft Word™ is the interface for editing text, but the time spent on regulatory compliance drops thanks to defined relations among documents, and to templates provided for certain documents.
