

Fast Environmental Compliance

Hosted ISO 14001:2004 environmental system

Build Fast and Efficient ISO 14001 Compliance based on QValid™

How do you make sure ISO 14001 EMS (Environmental Management Standard) is implemented and maintained correctly, using a reasonable amount of resources and without slowing down the day to day operation of your business?

ISO 14001 implementation
using QValid™

Less time and effort to maintain ISO 14001

By linking related information inside the same document or across separate documents, QValid™ provides a clear view of the system. When changes in one document affect related documents, it is easy to find and bring the others up-to-date. The system highlights "what needs to be done", and enables a wide view of the EMS measures.

Familiar Interface - Microsoft Word

QValid™ is integrated with Microsoft Word, so users are capable of editing and reviewing documents in the familiar interface. An Add-In is installed in MS Word, to allow full benefit of the QValid™ features.

Faster implementation using specially
designed templates

You will be able to use the SOP templates provided in QValid™, when creating the documentation. A pre-constructed EMS manual with examples of objectives, targets and policy statements will also be provided to accelerate implementation.

Cost effective solution

For the QValid™ managed service you will pay a constant annual fee. No additional costs, no hidden costs! As the service is hosted by Clarmon you will not need to pay for maintenance, support or upgrades.

Enforced compliance

Saved in QValid™, the documents can always be found and managed from Internet Explorer. The application sends e-mail notifications, whenever a task has to be completed, or when a document becomes out of date. The reports that show progress of every environmental task, the automatic audit trail and electronic signatures also ensure a desirable audit outcome.

Environmental Management with Clarmon's hosted QValid™ solution

Who we are

Clarmon Corporation is a privately owned company founded in 2004.

Clarmon is established and sustained by people with extensive experience in Compliance Management, Quality Assurance and CSV. They have been brought together by the belief that documentation processes can and should be simple and automated.

We are headquartered in London with a highly experienced development and consultancy team in Bucharest, supported by sales staff in Dubai and Singapore and by a number of global partners.

What we do

We provide configurable software solutions to solve your documentation problems efficiently.

We support solutions for:

- Computerised System Validation
- Change Control and Configuration Management
- Equipment Inventory Management
- Corrective and Preventive Actions (CAPA)
- Audit Management
- Facility Validation Management
